

**HIRSCHMANN GmbH -
innovative for more than 60 years**

Enthusiasm for technical developments, joy about innovations and quality consciousness characterize the HIRSCHMANN GmbH for more than 60 years. The medium-sized enterprise from Baden-Württemberg with about 200 employees sets standards with trendsetting products amongst others for vehicle construction, motor sport, aerospace, railed vehicles, mechanical engineering, naval architecture and wind power plants. Their core competences lie in three product lines: Rod Ends and Spherical Bearings, Rotary Indexing Tables and Reference Systems. In these sectors HIRSCHMANN has extensive expert knowledge as well as experience for decades and can offer a varied standard assortment as well as customer-specific solutions.

Spherical plain bearings made by HIRSCHMANN are structural elements proved for a million times and based on friction technology for static and dynamic power transmissions. As one of the leading manufacturers of heavy-duty spherical bearings and rod ends HIRSCHMANN offers a wide range of bearings, from relubricatable and maintenance-free versions up to high-end solutions. They are characterized by extreme robustness and persistence. HIRSCHMANN stands for quality „Made in Germany“ – for this intention a qualified staff in engineering, production and sales works hand in hand. Our components are manufactured in Germany according to strict quality standards.

Milestones in History

1957: Foundation of the marketing company Carl Hirschmann AG&Co in Stuttgart. Corporate purpose was sales and distribution of imported from the United States UNIBAL[®] rod ends and spherical bearings.

1961: Move in the new built factory building in Winzeln (near Rottweil) and start of production.

1966: Development and start of production of clamping systems and coordinate tables.

1967 - 1980: Repeated expansions of production area, storage and dispatch rooms; different newly built production halls.

1984: First applications of HIRSCHMANN spherical bearings in satellite technology.

1991: Construction of a three-floored administration building and creation of additional storage areas.

1992: Foundation of sales and marketing company HIRSCHMANN ENG. USA, INC. based in Chicago.

2002: Management buy-out of the company group.

2006: Certification according to EN 9100, the international accepted standard of aerospace industry for Quality Management in design, development, production, assembling and maintenance.

2010: New strategic division into the product lines HIRSCHMANN REFERENCE SYSTEMS and HIRSCHMANN SPHERICAL BEARINGS.

2011: HIRSCHMANN group takes over insolvent company JauchSchmider GmbH & Co.KG. JS GmbH is founded as subsequent company and continues business of JauchSchmider GmbH & Co. KG.

2013: Building of a new production hall and removal of JS-GmbH to Fluorn-Winzeln.

HIRSCHMANN

SPHERICAL BEARINGS

2015: Team Porsche decides to use new developed HIRSCHMANN Aluminum-Titanium lightweight bearings in LMP1 race.

2016: Introduction of new developed aluminum-titanium lightweight bearings with Tie Rods made by Teufelberger for aerospace.

2016: Market launch of world novelty and patented maintenance-free for life power transmission with conductive micro fibre rings instead of carbon brushes for use in rotary indexing tables in EDM.

2016: HIRSCHMANN was honoured with the “ThinKing”-Award for innovations in lightweight production.

2017: Introduction of new Hollow Axle Clamping System μ -PrisFix for precise positioning of work pieces for 360° machining of internal contours.

2017: Market launch of new Control Unit with touch display and intuitive menu navigation.

2017: Introduction of new Highspeed RT-Axis for serial laser machining at maximum speed and launch of new ultra flat reference system “ μ -PrisFix Flat”.

2018: JS GmbH is completely integrated to HIRSCHMANN group.
